

## **Holdan to Launch DV Bank at The Production Show**

The DataVideo DV Bank is an 'atypical, stand-alone, self contained' video disc recorder.

Smarter and easier than Computer Interfaced Fire wire drives, the DV Bank Hard Drive Video Recorder/Player has a built in special purpose processor for all user controls and management of the included 60 Gigabyte hard disk drive. It is compatible with both MAC's and PC's and includes PC/1394 edit software.

The DV bank works just like a video recorder (even has buttons like a video recorder), and is compatible with most video systems (it takes a DV signal in and out). The unit is Portable (runs off 12v, can be used on location). Instant ON (no waiting for computer boot up / close down) and has its own propriety filing system specially designed for large video and audio files whereas FAT 32 is designed for general purpose data file.

More reliable than a computer supported hard drive - the DV Bank has its own processor to look after the drive, giving your computer less to do and therefore less down time. When connected to a computer the DV Bank is seen as a DV device, not a hard drive. Giving you the advantages of a tape recorder but with instant access to any point, loop, segment playback etc.

The DN100 will be available from Holdan, Tel:0845 130 4445, Fax 01457 850964, Email:sales@Holdan.co.uk, Web:www.Holdan.co.uk
