

Post Production

Whether you're editing photos or a large video project, we have the post-production solutions for you. From software to hardware and everything in-between, we offer everything to get your editing suite ready to go.

Grading & Production Monitors

We all know how much effort is put into achieving the perfect image and having that represented accurately both in production and post production is equally important. That's where our range of monitors come in, with features such as HDR imaging, monitoring tools and wide colour gamut you can comfortably focus on creating.

Editing Software

The edit is where it all comes together, that's why we offer the dynamic and feature-rich software, DaVinci Resolve from Blackmagic Design. This industry standard software is used on countless blockbuster films and covers all areas of post-production including video editing, audio editing, visual effects, and it's all-important stand out colouring suite.

Storage & Readers

Data and storage management can make or break a project, and having the right storage products can save a huge amount of time. We offer entry level storage solutions up to network storage and raid systems that ensure both the safety of your data and the easy management you need. We also supply high speed tested readers to deal with small form memory quickly.

Thunderbolt Expansion Products

All editing peripherals require additional inputs and connections to get up and running. Thanks to Sonnet Tech, this isn't an issue. Sonnet is at the forefront of Thunderbolt technology, offering PCIe® card expansion, external graphics (eGPU) options, versatile docks and adapters, as well as a spectrum of network, storage, and other interface cards.

Remote Collaboration

Wireless is in, and cables are out! Just kidding, we appreciate an SDI cable as much as the next person. When it comes to the world of production, time is money and speed is vital. Luckily, we have the likes of Atomos and their Connect products that speeds up file transfers and send video just shot on location, directly to editors anywhere in the world to begin post-production. This range also offers the ability to live stream to all major social media platforms.
