

Blackmagic Design Studio Converter

ProdCode: BMDCINSTUDMFTHS

Converter for Studio Camera 4K Pro

[\[Download Images\]](#) (.zip file)

Features

With 10G Ethernet on the Pro model, you can connect all signals to the camera with the one Ethernet IP link connection. That means the camera feed, return program feed, timecode, reference, tally, talkback and control are all sent down the single cable. That's the same benefits of SMPTE fiber, but the standard 10G copper Ethernet cable is much lower cost. The Blackmagic Studio Converter allows breakout of all the video, audio and talkback connections at the studio end. It also includes a massive power supply that powers the camera down the Ethernet cable, so you don't need a power source near the camera. Plus you can fit 2 per rack unit using a Blackmagic Universal Rack Shelf.

- Converter for [Studio Camera 4K Pro](#)
- Ethernet IP link connection
- Camera feed, return program feed, timecode, reference, tally, talkback and control are all sent down the single cable
- Power the camera via the Ethernet cable and convert the camera and program return feeds to SDI
- Use low cost 10G copper Ethernet cables
