DJI's Ronin Arca-Swiss plate for the RS 2 & RSC 2 can be notoriously challenging to work with. The KONDOR BLUE Ronin Arca-Swiss Plate seeks to overcome the limited functionality of the DJI plate. The KB plate is extra wide at 80mm allowing the plate to be mounted at multiple connection points to camera cages. This also makes it easier to balance the camera on the gimbal by giving it more range and an engraved metric scale for repeatability when mounting.

The Ronin Arca-Swiss Plate is lightweight, fully machined, and includes an integrated

4mm hex tool for mounting the included ¼-20 bolts to a camera or cage.
