Panel designed for operability

With a 1/4 rack size housing, four units can be installed in a single 19-type EIA rack, which are used as standard around the world.

The layout of the operation buttons on the panel simplifies operation by prioritizing frequently-used functions. Knobs for master gain, colour temperature, master flare, etc. can be assigned by users. Frequently-used functions such as gain and matrix can also be assigned to priority buttons. This enables rapid operation that can be adapted to the workflow of each location.

3.5-type colour LCD touch panel

The new high-resolution 3.5-type colour LCD panel now supports touch operation and provides ease of use on location through high visibility and intuitive operation.
