4K PTZ Camera with 20x Optical Zoom and supporting SRT and Zoom - Black

[\[Download Images\]](#) (.zip file)

Features

- 4K PTZ Camera with 20x Optical Zoom and supporting SRT and Zoom
- 1/2.5-type 4K MOS sensor, 74.1° field of view and 20x Optical Zoom
- Built-in Auto Tracking Function
- Direct Drive System for improved responsiveness and quietness
- Image stabilizer for stable video shooting
- Excellent system flexibility to achieve smart wiring and smooth operation

The AW-UE30 4K PTZ supports both HDMI and IP which makes it an ideal option for using within existing HD or 4K workflows thanks to its simultaneous video output feature. It also features a wide-angle lens with a 74.1° field of view and a 20x optical zoom, enabling a wide area to be shot from a limited installation space, in addition to maintaining high image quality at high zoom ratios. This allows shooting in large indoor spaces.

The UE30 features a compact design to easily blend in with its surroundings and to operate quietly for flexible usage in any video shooting location or condition. It is easy to install and to operate to ensure the capture of stable images, so even people

unfamiliar with video shooting or camera operation can use this PTZ camera. It is possible to link it to online conference software or online applications, so online video streaming is easy to initiate. It also features PoE+ support for camera power, control, and video transmission over a single cable. Optical Image Stabilisation (OIS) has been added to the camera to ensure smooth pan-tilt movement even in busier environments or when placed onto a robotic system for example.

The camera's built-in auto-tracking function allows capturing a moving presenter and speaker. The camera follows the speaker without the need for an operator, allowing for realistic video shooting at any time.

The AW-UE30 is compatible with Panasonic's entire ecosystem of solutions. This includes usage with remote camera controllers, the Media Production Suite software platform, and its optional Auto-Tracking software for presentations, lectures, or similar.

When using the free-to-download PTZ Virtual USB driver software and a LAN connection, it is possible to obtain video and audio from the UE30 in the same way you would when using an USB camera.

There is a wide variety of IP transmission protocols available. Out of the box, Secure Reliable Transport (SRT) is supported to maintain stability while transmitting high-quality video, even in unstable network environments. SRT allows video distribution over public internet in a secure and reliable way, as it offers encryption and as lost packets are automatically detected and resent.

RTMP/RTMPS* provides direct streaming to live broadcasting services such as YouTube Live and Facebook Live from the camera directly. (RTMP: Real-Time Messaging Protocol, RTMPS: Real-Time Messaging Protocol Secure.)

Need Further Support?

If you have any questions or require additional support regarding this product release, please do not hesitate to contact us. Our team is here to assist you with any inquiries or provide further information or marketing collateral as needed.
