

SLIK I-Bracket

ProdCode: SLI3462

Universal Arca compatible bracket

[\[Download Images\]](#) (.zip file)

Features

- Universal Arca-compatible bracket
- Unique I-shaped plate
- Perfect fit for a variety of mirrorless cameras

The SLIK I-Bracket is a universal Arca-compatible bracket that is attached under the camera.

It is a unique I-shaped plate, but it can be installed to the tripod head that conforms to the same standard in both the horizontal and vertical positions.

The position of the camera screw can be moved and adjusted the plate to attach the fringe to the camera body, so it fits firmly with the camera.

Compatible Models

- SONY 7R IV • 7R III
- CANON EOS R6 • R5

- Nikon Z6II & Z7II

Features

Perfect fit for a variety of mirrorless cameras

The screw position can be adjusted forward, backward, left and right to fit the popular full-size mirrorless cameras. The camera does not rotate even when in portrait position, thanks to the bank of the bracket.

Adjusting the camera screw position

By loosening two hex socket bolts, you can move the camera screw unit 10mm from side to side. In addition, there are two rows of screw holes at 10mm intervals, so you can move the camera mounting screw up to 20mm.

Camera screw can be fixed with a coin

In addition to the hex wrench, it is also possible to tighten the camera screw using a coin.

Unique "I" shape for increased versatility

Among the many L-type brackets, SLIK offers the "I" type. It does not disturb the opening and closing of the terminal cover or the connection to various interfaces.

Even the "I" shape can be placed vertically

The end of the bracket is also an Arca-compatible shape, so the camera can be mounted on the tripod head in a vertical position.

Minimize optical axis shifting even position change

The I-Bracket minimizes optical axis shifting even if the horizontal position is changed to a vertical position.
